NOTE

- One load is 25% to 100% load, the other load is 100% load, the output voltage variable rate is within ±5%.
- Typical value at nominal input voltage and full load.
- Test by nominal input voltage and constant resistor load.
- Measured Input reflected ripple current with a simulated source inductance of 12μH.
- Operation under no-load and 10% conditions will not damage these devices, however they may not meet all listed specifications.
- It's necessary to add minimum capacitor in output for some models, please check single model datasheet for detail value.
- Input filter components (C1, C2, L) are used to help meet conducted emissions requirement for the module. These components should be mounted as close as possible to the module; and all leads should be minimized to decrease radiated noise.
- An external filter capacitor is required if the module has to meet EN61000-4-4 and EN61000-4-5. The filter capacitor SCHMID-M suggest: Nippon - chemi - con KY series, 220μF/100V.
- Exceeding the absolute ratings of the unit could cause damage. It is not allowed for continuous operating.
